SUMMARY

Full-stack engineer who designs and ships complete applications: front-end (React, Next.js), mobile (React Native), backend (Supabase, Express), and databases (SQL). Built 7 production-ready projects from concept to deployment, including business platforms for reservations, service management, and customer engagement, an AI-powered meal planning app, and a real-time video chat platform. Proven ability to understand client needs, translate them into technical solutions, and deliver polished, user-ready products. Currently a 4th-year BSIT student (Academic Scholar) and Claude 101 certified.

TECHNICAL SKILLS

Strong (Production-Ready): React.js, Next.js, Tailwind CSS, Supabase, Vite, SQL
Experienced: TypeScript, React Native (Expo), Node.js, Express, PHP, Laravel, LiveKit (WebRTC), Claude API, Figma, Git/GitHub, Vercel, Custom Domains, SEO Optimization

EDUCATION

Bachelor of Science in Information Technology
University of Cebu Lapu-Lapu and Mandaue (UCLM) — Mandaue City, Cebu, Philippines
2023 – Present | College Academic Scholar

PROJECTS

Nutrio | 2026 | nutrioapp.vercel.app
- Team-built AI meal planning and food waste reduction system: Android app (React Native + Expo), Express API, and Supabase.
- Pantry tracking through photo recognition and barcode scanning, powered by the Claude API and Gemini.
- Plans meals around ingredients nearing expiry and routes surplus food to donations and barangay waste programs.
- Built an admin dashboard and a barangay portal (React) with Excel and PDF reporting.

ChatUrMate | 2026 | chaturmate.vercel.app
- Random 1-to-1 video chat with private invite-code rooms, built with Next.js, TypeScript, LiveKit (WebRTC), and Supabase.
- Real-time matchmaking queue with instant “Next” pairing, plus text, image, and voice messages.
- Report-and-block tools that end a session instantly, plus an admin panel to issue and revoke invite codes.
- Short-lived, room-scoped access tokens keep media server credentials out of the browser.

StringGuard | 2026 | stringguard.online
- Privacy-focused text storage application with client-side encryption, built with React + Vite and a Supabase backend.
- Integrated a rich text editor (Tiptap) and a code editor supporting 15+ languages (CodeMirror).
- Implemented password-protected workspaces using bcryptjs and PBKDF2 key derivation.
- Supports multi-tab use, auto-save, and a fully responsive layout.

Marina Seaview | 2026 | marina-seaview.vercel.app
- Reservation landing page for an event venue, built with Next.js and Tailwind CSS.
- Designed a gallery and menu showcase to support customer decision-making.
- Integrated a Messenger FAB and a smart reservation form that pre-fills user details into Google Forms.
- Deployed on Vercel.

BST Sweetbakes | 2026 | bst-sweetbakes.vercel.app
- Product showcase site for a local bakery, built with React and Tailwind CSS.
- Built a product gallery and menu, plus a Messenger FAB directing customers to business chat.
- Focused on customer engagement and inquiry conversion.

Freesoul | 2026 | freesoul-ph.vercel.app
- Multi-feature service platform for a device repair shop, built with Next.js and Tailwind CSS.
- Developed a responsive frontend with a service inquiry form, a nationwide quote request section, and a blog.
- Integrated a Messenger FAB for customer contact.

UCLM CCS PSITS Voting System | 2026 | github.com/ire-zepelli/voting-system
- Real-time digital voting platform used by the UCLM CCS department for officer elections.
- Developed a responsive React.js voting interface handling concurrent users and real-time vote updates.
- Collaborated with a team on the Express backend and Supabase integration.
- Deployed to production for actual department elections.
